Cross-platform fee tiers

Last updated: July 9, 2026

On **July 9, 2026**, we changed how your fee tier is determined on Kraken. Instead of looking at each product separately, your tier is now based on your activity across the entire Kraken platform, so you're always getting credit for the full value you bring to Kraken.

Note

There was no action required from you. On July 9, 2026, your account was automatically placed in the appropriate fee tier.

What changed

New fee tiers and updated fees

New tiers were introduced and some existing fees changed. See the table below for the updated rates.

How your tier is determined

Your tier is based on the **best of**:

- Your **spot trading volume**
- Your **futures trading volume**
- Your **Assets on Platform (AoP)**

Your tier reflects the most favorable of the three measures. So if your futures volume is where you're most active, that now counts toward your spot tier, automatically. If more than one measure qualifies you for the same tier, your rates remain unchanged, qualifying through multiple measures at the same tier does not provide additional benefits.

Pro 2	\$100M+	≥ \$500M	25m	0.0 %	0.08 %	-0.0050%	0.0150%
Pro 3	\$250M+	≥ \$1B	50m	0.0 %	0.07 %	-0.0060%	0.0135%
Pro 4	\$400M+	≥ \$2B	80m	0.0 %	0.06 %	-0.0060%	0.0130%
Pro 5	\$500M+	>5B	100m	0.0 %	0.05 %	-0.0060%	0.0125%

Spot trading volume

Spot trading volume encompasses trades executed in a 30-day rolling period on **Kraken Pro markets**.

Purchases made outside Kraken Pro, for example with Instant Buy, are not included in your spot trading volume.

What's included

- Spot and margin trades on [crypto-cash markets](#)
- Spot and margin trades on [crypto-crypto markets](#)
- Spot and margin trades on [xStocks markets](#)

What's excluded

- Spot and margin trades on [forex pairs, including stablecoin/fx markets](#) (e.g., USDC/USDT, EUR/USD, USDC/USD)
- Trades made outside of Kraken Pro or Kraken Desktop, for example, the Instant Buy feature on Kraken ([kraken.com](#), or the Kraken App)
- Conversions

Assets on Platform (AoP)

Assets on Platform is the total USD value of eligible assets you hold on Kraken. Here's what you need to know:

What's included

- Assets held in your Kraken wallet (including tokenized assets, crypto assets, and fiat)
- Assets participating in Opt-In Rewards
- Staked assets
- Dual investment balances

What's excluded

- Loans
- Embed parent client balances
- Equities

How AoP is assessed

- Your AoP is assessed **point-in-time** — it reflects your current balance, not a 30-day rolling average.
- AoP is denominated in **USD**. If the market drops, your AoP value drops and your tier adjusts immediately.
- The same applies if you withdraw funds — your tier always reflects your current balance.

Futures trading volume

Your futures trading volume now carries over to your spot fee tier. If your futures activity alone qualifies you for a higher tier than your spot volume or AoP, that higher tier applies everywhere. Futures volume is measured over a **30-day rolling period**.

What's included

- Trading volume on [Kraken Futures contracts](#)

What's excluded

- Volume on other Kraken Pro markets (spot, margin, etc.) — these are counted

separately.

Check the [fee schedule](#) for the full list of futures fee tiers and rates.
